

# Production PDF Generation

This sample exercises structured rendering, reusable components, image embedding, tables, metadata, header and footer rendering, and page numbering.

:

| Input               | Backend         | Use case                             |
|---------------------|-----------------|--------------------------------------|
| Document definition | PDFKit          | programmatic reports                 |
| HTML and URL        | Playwright      | browser-accurate layouts             |
| Existing PDFs       | pdf-lib         | merge, split, metadata, watermarking |
| Security            | AES-256 adapter | password and permission protection   |
